PROFESSIONAL SUMMARY

Computer Science student with strong experience in full-stack development and relational database design. Proficient in Python, Django REST, C# and React for building scalable applications, and skilled in PostgreSQL, SQL Server, and Oracle for database design, query optimization, and data management. Passionate about building efficient, data-driven systems with clean architecture and strong problem-solving abilities.

PROJECT EXPERIENCE

Alumni Networking System – Alumni Engagement & Career Platform

Python, Django REST, Channels, React, SQLite

- Developed an alumni networking platform with structured database design for users, jobs, events, and connections.
- Implemented JWT authentication, role-based permissions, and a personalized recommendation engine that scores skills via cosine-like similarity dictionaries.
- Delivered REST APIs plus WebSocket-based chat using Django Channels and JWT-secured sockets for live one-on-one messaging.
- Crafted React SPA with MUI, dashboard analytics, messaging UI, job board, and event RSVPs powered by centralized Axios client.

HireFlow – AI-Powered Resume Screening System

React, n8n, Google Gemini, Gmail, Google Sheets, Postgres

- Built a fully automated recruitment pipeline using n8n that screens resumes.
- Integrated Google Gemini (LLM) to extract structured data from PDFs and score candidates against job requirements.
- Implemented custom matching logic: skills overlap + experience ratio → overall score (0-100).
- Reduced manual resume screening time and deployed with Gmail trigger.
- Auto-replies to candidates ("shortlisted" or "rejected") based on AI decision.

SmartCitizen – Citizen Complaint Management Platform

C#, ASP.NET Core MVC, SQL Server

- Designed SQL Server database schema for managing users, complaints, and status tracking.
- Implemented optimized queries for filtering and tracking complaints by category, area, and status.
- Developed modular backend ensuring efficient data handling and maintainable database operations.

INTERN EXPERIENCE

Connexica Technologies – AI Intern

Remote | 2025

n8n, API Integrations, LLMs, Automation

- Built AI-driven automation workflows in n8n, coordinating multi-step logic and intelligent decision-making across internal tools.
- Integrated external APIs and optimized data flows to create reliable, scalable backend automation pipelines.
- Designed and refined prompt engineering + LLM interaction patterns to improve structured outputs and workflow accuracy.

CERTIFICATIONS AND TRAINING

- Aqore Learning Platform – SQL & Database Development Bootcamp(Dec 1st to Jan 1st).
- New Summit College (TechTrix) – Flutter Mobile Development.
- New Summit College (TechTrix) – UI/UX Design.

EDUCATION

New Summit College

Bsc. Computer Science and Information Technology

Shantinagar, Kathmandu

Janjyoti Secondary Boarding School

+2 (Science)

Gulariya, Bardiya

Graduation Date: Jan 2021

SKILLS & INTERESTS

Languages: C++, C#, Python, JavaScript

SQL & Databases: Joins, Subqueries, Aggregations, Window Functions, CTEs, Indexing

Backend: Django REST Framework, Django Channels, REST APIs

Frontend / Frameworks: React.js

Databases: PostgreSQL, SQL, SQLite, Oracle

Tools & Technologies: Git, GitHub, Postman, n8n, Google Gemini API, Google Sheets, Gmail Integration

Soft Skills: Problem Solving, Communication, Self-Learning, Adaptability

Interests: Full-Stack Development, SQL Development and Analytics, AI
